ARYAN VERMA

aryanverma102007@gmail.com | Delhi, India | bu1ldr.github.io/Portfolio
GitHub: github.com/BU1IDR | Credly: credly.com/users/aryan_v | LinkedIn: linkedin.com/in/aryanver

Second-year Information Technology undergraduate (CGPA 9.04) who learns by building. Built secscan, a released Python CLI that points dependency-CVE, source-pattern and live-site checks at one target and keeps the intrusive probes behind an authorization gate; before it, a file integrity monitor.
Grand Finalist (Top 30), RAKSHAM Hackathon, IIT Delhi. Strongest in Python and Linux. Looking for a cybersecurity internship with real systems in it.

SKILLS

Security: Ethical Hacking, SAST, DAST, Dependency Scanning, Nmap, Burp Suite
Data & AI: Data Analytics, Pandas, LLM Workflows, Prompt Engineering
Systems: Linux, Bash, Git, Networking

EXPERIENCE

IIT Delhi | RAKSHAM AI Cybersecurity Hackathon - Grand Finalist (Top 30)
Oct 2026

- One of 30 finalist teams (Team Koshish, four people); owned the engine and the ML.
- Built SACH, a scam-warning prototype for the payment screen.

IBM SkillsBuild | BharatCares Internship - Data Analytics with AI
Aug 2026 - Sep 2026

- Capstone: segmented 1.07M Online Retail II lines; identified £1.69M of revenue at risk.
- Used LLMs inside the analysis rather than alongside it, where the two stopped being separate.

PROJECTS

File Integrity Checker
Lightweight file integrity monitor that takes a trusted baseline once and identifies exactly what was modified, added, or deleted.
Tech: Python, SHA-256, JSON, CLI

अर्थNiti (ArthNiti) - Solo Developer
Rule-based loan, scheme and registration advice for rural micro-entrepreneurs in eight Indian languages; a model only helps with optional voice intake and a written plan. Began as the Smart India Hackathon 2026 team prototype (MoSJE, problem statement SIH26091), where I led the backend; now my solo entry to the Meta Global AI Developer Hackathon (Indie Track).
Tech: Python, FastAPI, React, Tailwind CSS, Vite

Security Scanner (secscan)
Scans a codebase or a live site: dependency CVEs via OSV.dev, SAST for dangerous sinks and secrets, passive DAST for TLS/headers/cookies, opt-in active checks behind an authorization gate.
Tech: Python, asyncio, httpx, cryptography, pytest (600+ tests)

SACH - Engine and ML Developer (Team Koshish)
A hackathon prototype: before a risky payment goes through, it asks who told the payer to pay, checks the answer against facts about the payee and warns on a mismatch, never blocking. Mismatches, with no message content, feed a radar for new scam waves. Synthetic and public data only.
Tech: Python, LightGBM, Kotlin, JavaScript

Document Forensics - Solo Developer
Offline forensics for a human investigator: scanned and digital documents go in, a dossier comes out in which every finding is traced to a box on a page of the stored file, backed by a hash-chained, signed audit trail. Lists anomalies for a reviewer; never decides authenticity. Solo entry to the DataOps Innovation Hackathon 2026, built and tested on synthetic documents only.
Tech: Python, FastAPI, RapidOCR, PyMuPDF, OpenCV

EDUCATION

Dr Akhilesh Das Gupta Institute of Professional Studies (ADGIPS), GGSIPU
Aug 2025 - Aug 2029 | B.Tech, Information Technology | CGPA: 9.04

Mother's Global School
Jan 2022 - Jan 2025 | Marks: 74.8%

CERTIFICATIONS

Cisco Networking Academy (2026): Junior Cybersecurity Analyst Career Path; Introduction to Cybersecurity; Networking Basics; Getting Started with Cisco Packet Tracer
IBM SkillsBuild (2026): Data Fundamentals; Getting Started with Data; Generative AI Essentials: Using LLMs to Work with Data; Make Agentic AI Work for You; Lab: Troubleshoot Your Code Using IBM Bob
Amazon Web Services (2026): Foundations of Prompt Engineering
E&ICT Academy, IIT Kanpur (2025): Fundamentals of C Programming
